DatabaseConnectionExample.java

Java JDBC database connection example

```
import java.sql.Connection;
import java.sql.DriverManager;
import java.sql.ResultSet;
import java.sql.SQLException;
import java.sql.Statement;

public class DatabaseConnectionExample
{
    private static final String JDBC_URL = "jdbc:mysql://localhost:3306/mydatabase";
    private static final String USERNAME = "root";
    private static final String PASSWORD = "password";

    public static void main(String[] args)
    {
        try (Connection connection = DriverManager.getConnection(JDBC_URL, USERNAME, PASSWORD))
        {
            Statement statement = connection.createStatement();
            String sqlQuery = "SELECT * FROM users";
            ResultSet resultSet = statement.executeQuery(sqlQuery);

            while (resultSet.next())
            {
                int id = resultSet.getInt("id");
                String username = resultSet.getString("username");
                String email = resultSet.getString("email");

                System.out.println("User ID: " + id + ", Username: " + username + ", Email: " + email);
            }
        }
        catch (SQLException e) {
            e.printStackTrace();
        }
    }
}
```
